# Prehistoric World (World History (Usborne))

## Synopsis

This volume traces the extraordinary evolution of our world, from the formation of Earth to the beginnings of human history, and looks at some of the amazing creatures that once inhabited our globe. It chronicles when life first appeared on Earth, why dinosaurs died out and how people survived the last Ice Age, covering a period up to 10,000BC. The book offers colourful maps showing the changing shapes of continents, the movement of people around the world and the development of life on Earth and presents detailed reconstructions and photographs of prehistoric artefacts. The "World History" series covers a wide range of countries and civilizations and offers a wealth of pictures and information. Thoroughly researched and written especially for children, four volumes cover a vast expanse of time, from the creation of the Earth to the dawn of the 21st century. Other titles in the series include "Ancient World", "Medieval World" and "The Last 500 Years".

## Book Information

[Books > Education & Reference > History > Prehistoric](#) #253913 in [Books > Reference](#)

Age Range: 8 and up

Grade Level: 3 and up

## Customer Reviews

My wife bought this for my son from Scholastic Book service and then it ended up becoming a bit of an obsession for my son and I. We have spent hours looking up the various creatures and studying fossils. This book is brief, but the illustrations are fantastic and evocative and give a good grounding of the great ages in the evolution of life on earth. The focus is broad and inclusive - from the rise of single celled life through the Burgess Shale, Cambrian, Silurian seas, fishes, advent of life on land,

reptiles, dinosaurs, birds, mammals - broken out by continents with a nice section on marsupials - and finally a about 1/4 of the book focuses on the rise of humans. There are pages for Australopithecines, Homo Habilus, Erectus, Neanderthals, Homo Sapiens, and a mention about rise of animal husbandry and agriculture. The scholarship is pretty up to date and the sins are mostly of omission. The strength is that the illustrations are so beautiful and dynamic (some have narrative elements which captivate kids). Books like this are gateways - they do not have enough content to provide a great education - but that brevity is a strength: they provide just enough to draw kids in. The one mis-step of this book is that it attempts to provide that next step by the so-called "internet-linked" feature. Visiting the usborne-quicklinks web site proved frustrating. The site is poorly laid out and is hampered by a terribly poor search functionality and some content that requires real player (which we choose not to run since it introduces spam IM messages). I found just going to Google far superior. There is GREAT pedagogical content on this site - but you have to dig around for it - work better done by a grown up than a child. Other than this quibble this book was definitely worth it. We all had a ball and I learned a lot myself (which was probably a factor in it getting my son so fired up too).

I'm assuming this book is out of print but not sure. I bought it used because I haven't seen anything like it on the Usborne site (at least not for USA). I don't know why because it's GREAT. The copy I received came from England and even in loved condition it was in great condition. Hardbound and glossy pages and like Usborne standards - well written and eye catching page layouts. My son is a dinosaur addict and this covers a lot about them as well other prehistoric creatures. I loved it personally and read it and it was a nice review since it's been a long time since I've been in school.

Great segment of their World History Encyclopedia which I own. This book seems to have very similar, if not the exact information (from what I can tell from the preview). I almost doubled up by buying this as well because the cover is so eye-catching!
