As we "deet deet deet" into the first panel like a capsule descending from outer space, we enter the remarkable world of a space race told comic book style. I've always been a fan of a storyteller who lights a fuse right away. Give us a ticking bomb, a deadline, a finite amount of time in which our hero must succeed or face annihilation: *Run Lola Run* and *Back to the Future* did it perfectly and we all remember the catastrophic Y2K computer bug that nearly wiped out the human race and unraveled the fabric of the space-time continuum. Thankfully Dick Clark was there to bring us home in the nick of time. In the case of T-Minus, the countdown is the premise of the book and while the reader knows that the race will be won when the clock expires, the book's characters are racing against a different deadline: JFK's challenge to put a man on the moon and return him to earth by the end of

the decade. So brings T-Minus: The Race to the Moon, a compelling behind-the-scenes story of the space race filled with software glitches, landing bags that deploy prematurely, loose heat shields and a pair of cosmonauts forced to hide in their downed capsule while Siberian wolves threaten them outside. Told with parallel stories of the United States vs. the Soviet Union, with characters that come and go as the years pass, the artwork pulls you into the world of scientists and space travelers and makes you feel what they actually felt. The character introductions are subtle. Every few pages I say to myself "Oh, there's John Glenn..." or "Hey, that's Yuri Gagarin." They are woven in seamlessly and their allegiance is discernable by a clever variance in speech bubble font (the Russkies speak their words with a backwards N).
