Getting Ready For Driverless Cars: Everything You Need To Know To Invest Now In The Companies Developing The Technology That Will Revolutionize The Way We Commute

Synopsis

Getting Ready for Driverless Cars - Everything you need to know to invest now in the companies developing the technology that will revolutionize the way we commute. Did you know that: 1. IEEEA projects that up to 75 percent of vehicles in the U.S. will be fully automated by 2040. 2. According to a University of Texas report, if just 10% of the cars on U.S. roads were autonomous, more than \$37 billion in savings could be realized due to less wasted time and fuel and fewer injuries and deaths. If 90% of cars were autonomous, then the benefit rises to almost \$450 billion a year. 3. A recent survey found that more than 75 percent of Americans said they'd consider buying a self-driving car. 4. Analysts predict cars with self-driving features will create an \$87 billion global industry by 2030. Driverless cars are poised to become the next technological innovation that will radically change the way we live. They will make driving safer, more efficient, and cheaper. Think driverless cars are a far-off futuristic dream? Think again. Driverless car technology is already here and is slowly being phased into many vehicles on the road today. Manufacturers like Ford, GM, Audi, BMW and Tesla have all either implemented elements of driverless technology into their cars or are developing new autonomous control features that will soon become standard features in passenger vehicles. Driverless cars have the potential to become a multi-billion-dollar industry. From the cars themselves, to the many advanced technologies that allow these cars to operate autonomously, there are a select group of companies at the forefront of this industry that are set to profit from the proliferation of driverless cars. Getting Ready for Driverless Cars offers the most comprehensive listing of the companies developing these companies and includes background information about each company's contribution to the driverless vehicle revolution. If you want to invest now in driverless cars, then Getting Ready for Driverless Cars will provide information you can use to identify these investment opportunities. In this book you will learn: 1. How driverless cars work 2. The technology that allows cars to operate autonomously 3. Safety benefits of driverless cars 4. Environmental benefits 5. Productivity and time savings benefits 6. The social implications of driverless cars 7. Public policy implications. And most importantly, you will learn about the companies developing driverless car technology. Why you should read Getting Ready for Driverless Cars: 1. You want to invest in companies developing driverless technology 2. You want an easy to understand explanation of how driverless cars work 3. You want to know when driverless cars will become commonplace 4. You want to understand how driverless cars operate safely 5. You want to know how society will adapt to adapt to driverless cars 6. You're skeptical about the market potential of driverless cars

Customer Reviews

This book was very informative as to where the future in automobiles is heading. Whether it's driverless Uber rides, driverless commercial trucks, or even a your own personal driverless vehicle, this book touches base on all the important issues we will be facing in the next transportation revolution.

With autonomous cars being tested across the US, Google and now all the car manufacturers are queuing up to join this race. Sullivan takes what could be a dry subject and brings it to life with clear, concisely articulated discussion around the aspects that will matter to us all. Nice job -Getting Ready for Driverless Cars: Everything you need to know to invest now in the companies developing the technology that will revolutionize the way we commute

Before reading this, I thought the concept of driverless cars - or essentially any self-transportation-turned-autopilot, was too far off and nothing to consider seriously yet. Who would trust a machine to make the split second decisions humans navigate every day while driving? But this book makes it clear that the technology is already here, and the transformation has already been set in motion. Sullivan does a solid job outlining the risks along with the benefits. Well

researched and thought provoking.

Sullivan makes it clear that driverless cars have the potential to change the entire commuting landscape, and he does it in a clear, concise, easy-to-read style that benefits both the tech buff and the layman. His most important contribution, however, is for the investor: he outlines the companies developing this technology and provides very useful data on which in this burgeoning industry may prove to be the best investment opportunities.

Very interesting book on a very interesting subject that will affect us all. Patrick did a real nice job of presenting the facts and trends that will shape driverless cars. As I was reading this book I was struck by how many times I heard things in the news that resonated with Patrick's message.

All car guys and tech geeks should order 'Getting ready for Driverless cars" written by Patrick Sullivan. A quick read but very informative and has everything you need to prepare for the future ... Driverless technology!
