National Geographic Little Kids Look And Learn: Colors

Synopsis

In these 24-page board books, young children will learn important skills such as naming, sorting, counting, matching, as well as basics such as colors, letters, and numbers, through fun, interactive games and activities in these photographically illustrated titles. In this book, children will learn colors by grouping colors in isolation, and then in context.

Age Range: 2 - 5 years

Grade Level: Preschool - Kindergarten

Customer Reviews

I love National Geographic's board books for toddlers. Both my kids (3.5 and 1.5 years old) really enjoy spending time with them and I am sure they learn a lot. The 'Look and Learn' series target younger kids (1-4 years) in general but some books are for the younger and some books are for the older ages within that range. In particular this book aims the younger children (I would say 1-2 years old) but the vibrant colors and beautiful pictures would attract the older ones too. This book is a 4.5 X 4.5 inches square with 22 pages. It is a classical board book design so that younger children can enjoy it without tearing the pages. The binding is of good quality (our experience from other books of these series) and the colors are vibrant. The colors included are orange, green, yellow, red and blue. Each color is mentioned in four pages. The first two give random examples of items that share that

color and the next two pages is like a quiz where it asks the child to find that color in a mixed picture. Final two pages are like a general quiz design where all colors are asked within one example. Not only it would help the little one learn the colors and the items that were depicted, but also you can manipulate the quiz pages and ask many other questions of your choosing. I am happy for the purchase

My 2 year old dug this out of a thrift shop bin and it turned out to be a great find. It mixes up the standard colors-boardbook formula with activity pages after each color page. I appreciated that interactive quality. The photos are extra bright and some of the examples are actually inventive (like a blue frog) instead of the same old stuff (yellow bananas--yes, they're in there too). A lot more fun than the other color books we've tried. Worth a gander.

I bought a few of these books for my friends 2yr olds birthday. Shes a more intelligent toddler so I looked for books that would match that. The pictures are bright, the information is good for a small child, short sentences with little informational tidbits. I think these will be excellent.

My son is 15 months old and he loves books. He will pick this book up, but he is not super interested in it. The pictures are vibrant and I like that they have little facts on some pages. I was expecting a little bit more from National Geographic.

18 month-old grandson likes it. Not sure if he might have already learned his colors, but when I go through the book with him, he does the exercises OK, pointing out the correct colors when I ask him point to a balloon of a certain color.

I wish I discovered this series of books sooner.....absolutely love them and so do my boys. The colors are great and real pictures with bright pictures but not overwhelming at all.

I teach preschooler who are 3, 4, and 5 years old. My students really love this book. It uses real life item pictures instead of cartoon drawings which is really helpfully in helping students learn their colors. The book is a board book so the pages bending are not an issue. It covers the basic colors and does not have too many pictures on each page.

Great little book- very vibrant colors which I love (as does our 17 month old daughter). The price is

right for this little book, pick one up!
